

Hospitality Solutions

Better operational productivity and personnel safety

Improve the satisfaction of your customers by optimizing your operations and bottom line. TABLETmedia's products target critical operational aspects of your organization and add more value to the capital expenditure of your MOTOTRBO radio communication equipment.

Two-way radios provide efficient real-time voice communications between your teams. Coupled with TABLETmedia's applications, you can take them to the next level by adding the quantifiable value of data services for guest management and alarm notifications.

They also improve the safety of your personnel by enabling emergency notifications with indoor location. Being able to track when and where an employee needs help has recently become a requirement in properties all across the country from Seattle to New York City.

JOB TICKETS

Use radios to handle tickets from your guest management solution faster than on any other device.

- HotSOS, SynergyMMS, Alice App, FCS, Starguest, Guestware, HotelExpert, iTendant, etc.
- Pool radios with user sign-in: in case of failure or loss just get the next available device.

REAL-TIME INDOOR LOCATION

Using iBeacons in critical location across the property.

- Get location text alerts on emergency.
- See a real-time log of employee locations.
- Track a radio from another radio or smartphone
- Run historical reports on the employee whereabouts or traffic through a location.

ALARM NOTIFICATIONS

Receive text messages with audible tones and vibrate alerts which can be read multiple times.

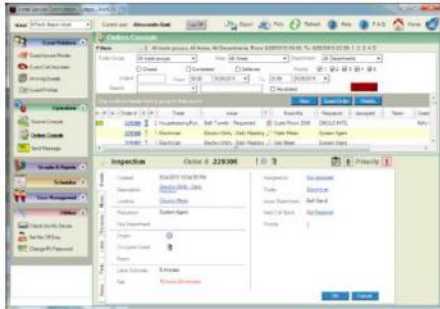

- Alerts from fire and security alarms, fire door open, elevators, HVAC, service buttons, etc.
- Dispatch the alert to distribution lists that include groups and individuals, smartphones, desks.

PHONE INTERCONNECT

Make and receive telephone calls from radios.

- Reach groups or individual radios.
- During an emergency, call in to reach all radios, manually dial 911 from radio and automatically dial 911 with pre-recorded voice message
- Intuitive operation with voice prompts, ringing with caller-ID and; address book.

Simplify your deployment while making it more affordable: one single gateway server is capable of multiple functionality. It communicates to the radios via the IP network or a dedicated mobile radio.

UNIQUE EXPERIENCE

Understanding the critical requirements of your business, we have grown by listening and appreciating your trust. We can only make great products if they need no support or, as needed, we are there to promptly help you. Since 2001 we have provided device manufacturers, dealers, and end-customers best-in-class prompt and hands-on support. All of our products are developed by us, right here in the USA. They are tightly integrated and modular to scale seamlessly and meet your requirements now and in the future.
